The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/584,793	Applicant(s) BATISTIC ET AL.	
	Examiner Bradley T. King	Art Unit 3657	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by KR 2002-009021.

KR 2002-009021 discloses all the limitations of the instant claims including; at least one inlet valve 3 and one outlet valve 4 for varying the brake pressure; a brake pressure channel which connects a pressure fluid source to the wheel brake and in which the inlet valve is mounted; and a return channel which connects to the brake pressure channel between the inlet valve and the wheel brake and in which the outlet valve is mounted, wherein the return channel being connected to a low-pressure accumulator **LPA**, wherein during a brake pressure control phase in which the brake pressure in the wheel brake is to be increased, both the inlet valve and the outlet valve are opened, and during a time of opening of the inlet valve, the outlet valve is opened for a length of time that is shorter than the time of opening of the inlet valve. The recitations related to the control of the valve have been given little weight since the

Art Unit: 3657

structures (controller) which achieve the recited function have not been recited in the claim. The valves of KR 2002-009021 are capable of being controlled as recited.

However, KR also appears to disclose the recited control, suggesting the timing for the outlet valve be the same or less than the inlet valve. Page 4.

Regarding claims 6-8, the device of KR 2002-009021 is capable of being controlled according to the recited timings.
